

## **ADVANTAGES OF THE MAXI-JECT SYSTEM**

### ***Blowpipes vs. Capture Guns:***

#### ***Capture Guns***

- Capture guns often injure animals due to the heavy barbed darts
- Capture guns are available as either 22 caliber or CO2 powered
- CO2 guns often lose pressure
- Capture guns are expensive (\$350-\$2000)
- Most capture guns create a loud noise upon firing

#### ***Blowpipes***

- Blowpipe usage reduces injury to users and animals
- Blowpipe can be shot from a vehicle or in the field
- Keeps animal quieter; therefore often requires less sedative drug
- Blowpipes are virtually silent in their use

The average user can become proficient with the blowpipe system in a very short period of time allowing them to successfully shoot the syringe dart accurately.

### ***SYRINGE DARTS AND NEEDLES:***

We offer blowpipe system kits in the following three sizes: 2ml, 3ml, and 5ml

- Blowpipe system kits include: blowpipe, 3 syringe darts, 3 needles, venting pin, syringe connector, filler syringe, safety cap, practice dart or practice needle, cleaning kit, instruction manual and custom case.
- The size of the blowpipe, syringe darts and needles included depends on the size of the system you choose.
- The 5ml kit works with the Telinject 5ml blowpipe syringe darts only.
- The 3ml kit works with the Telinject 3ml, 2ml, 1ml blowpipe syringe darts.
- Our kits include everything you need except the drug you are intending to use.
- Needles and syringes are re-usable
- Automatic injection
- Excellent for use with dogs, cats, cattle, horses, wildlife and zoo animals.
- Dosage range is from ¼ to 5ml

Needles and syringe function properly 98.2% of the time according to a 20 year service record with zoo veterinarians.

### ***Blowpipe Range and Velocity:***

- Up to 20 meters (50-60 feet). About 150 ft./second velocity.
